Given two integers, l and r, find the maximal value of a xor b, written $a \oplus b$, where a and b satisfy the following condition:
$l \leq a \leq b \leq r$
For example, if $l = 11$ and $r = 12$, then
$11 \oplus 11 = 0$
$11 \oplus 12 = 7$
$12 \oplus 12 = 0$
Our maximum value is 7.
Function Description
Complete the maximizingXor function in the editor below. It must return an integer representing the maximum value calculated.
maximizingXor has the following parameter(s):
l: an integer, the lower bound, inclusive
r: an integer, the upper bound, inclusive
Input Format
The first line contains the integer l.
The second line contains the integer r.
Constraints
$1 \leq l \leq r \leq 10^3$
Output Format
Return the maximal value of the xor operations for all permutations of the integers from l to r, inclusive.
